

Companies that **rely** on data **rely** on ENGIN.®

M2 Systems' ENGIN (Enterprise Generic Integrator) has been solving system integration problems for more than 25 years. Today, in its sixth generation of evolution, ENGIN is more robust than ever, processing more transactions daily than all of our competitors combined.

Amazingly **agile**, incredibly **simple**.

ENGIN workflow management is simple to configure using drag-and-drop capabilities. Data manipulation can be performed using content from various sources. Legacy system interfaces can be provisioned in days, not weeks. New services are easily defined and deployed without application programming.

Making technology and business **work together**.

ENGIN provides high-volume, real-time transaction processing to some of the world's most performance demanding enterprises. Scalability is inherent in our design, not an afterthought.

Who relies on ENGIN?

- **The sixth-largest** U.S. payment processor
- **The fifth-largest** bank (by assets)
- **The third-largest** financial services IT provider
- **The second-largest** private label card servicer
- **Three of the largest** healthcare claims processors
- **One of the world's largest** online retailers
- **The number one** provider of logistics services

M2's ENGIN middleware is used in a wide range of industries including healthcare, banking and finance, manufacturing, transportation, logistics, retail, telecommunications, government and more.

Long story short: ENGIN turbocharges your company's ability to transact large volumes of data. In the process, we help transform your company's efficiency, economy and performance.

m2systems

Transacting data,
transforming companies.

m2-corp.com

ENGIN®

Flexible systems architecture connects seamlessly to a wide variety of hosts, servers, internet, networks, databases, files and communications systems. Table-driven API administration.

INTEGRATE

Non-invasive integration with existing systems encourages trading partners to submit transactions electronically.

Transparent Integration

MANAGE

Manages, authorizes and authenticates the application of specific business rules based on trading partner's profile.

Trading Partner Management

ROUTE

Powerful rules-based engine for "partner specific editing." Data edits and validation are governed by trading partner profiles.

Intelligent Rules Automation

TRANSLATE

ANSI X.12 EDI formats, ISO, SOAP, XML, web services and proprietary formats.

Any-to-Any Transformation

Flexible Systems Architecture

Web-enabling Capabilities

Integrated solution for giving new life to your legacy application. Leverage open technology such as XML, SOAP and JSON.

Transact

Transaction handling superiority is the backbone of ENGIN. We take the risk out of high performance computing and deliver messages reliably, where they belong.

Transmit

ENGIN's exclusive message compounding technology allows you to broadcast a single message to many different systems and collect data from various sources. You can also enrich data content from multiple sources, internal and external, to your enterprise.

Transform

ENGIN is the perfect platform to integrate disparate applications and provide a common foundation for adding new solutions and services. From web services to internal back-end legacy systems, ENGIN provides seamless and efficient access to the data and services you need.
